

Technical Data Sheet

Features

- Establishes Rapidly
- Forms Attractive, Dark Green Turf
- Excellent Brown Patch Resistance
- Ideal for Sun & Shade
- Superior Drought & Wear Tolerance

Ideal for home lawns, athletic fields, golf course roughs, playgrounds, commercial landscapes, parks, campgrounds, cemeteries, and roadsides.

Formula

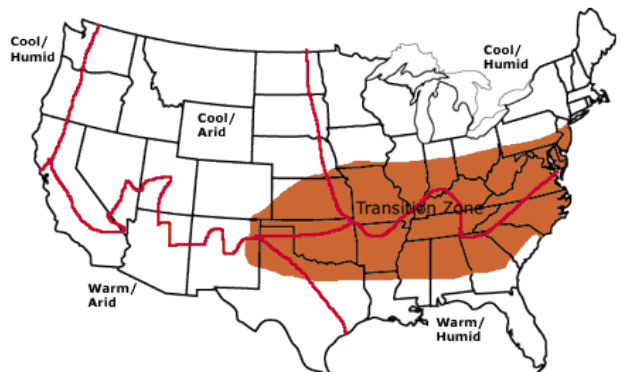

Contains four turf-type Tall Fescues, which exhibited an EXCELLENT rating from the North Carolina Recommended List:

25% Escalade ● 25% Falcon IV ● 25% Greenkeeper ● 25% Rendition

General Description

Crown Jewel turf-type Tall Fescue Blend was formulated to produce a high quality, permanent turfgrass throughout the 'transition zone' (shaded area of map) of the United States.

Crown Jewel turf-type Tall Fescue Blend performs very well in sun and moderate shade. Some components of this turfgrass seed blend exhibit high endophyte levels for improved resistance to surface feeding insects. This Green Diamond branded seed blend comes with a Certified Blue-Tag, a Best-In-Class designation.

Suggested Seeding Rate

- New Establishment 6 to 8 lbs. per 1,000 sq. ft.
Slicer / Seed Renovation:
- 20% to 50% existing cover 5 to 7 lbs. per 1,000 sq. ft.
 - 50% to 75% existing cover 4 to 7 lbs. per 1,000 sq. ft.

Establishment & Maintenance

Adequate seedbed preparation is paramount to new turfgrass establishment, as well as, overseeding existing sites. Adjust soil pH (if necessary) and then apply a 'starter' fertilizer (e.g. 18-24-12) prior to seeding.

Seed at the suggested rate. Crown Jewel turf-type Tall Fescue Blend germinates, when soil temperatures are between 60°F and 85°F. For best results, ensure good seed to soil contact during the seeding process. It is necessary to provide light, frequent irrigation for optimum germination. Under sufficient soil temperature and soil moisture, germination should be complete in three to four weeks. New seedlings require eight to twelve months to depict mature growth characteristics.

Maintain a sharp mower blade to prevent tearing of young, tender leaves. Under normal situations, a cutting height between 2" and 3" is recommended.

Crown Jewel turf-type Tall Fescue Blend responds well to three to four pounds of actual nitrogen per thousand square feet, on an annual basis.

Bid Specifications

- Green Diamond brand
- Crown Jewel turf-type Tall Fescue Blend
- Certified Blue-Tag
- Packaged in a 50-pound, woven, polypropylene bag
